Krion key

**HIGH MINERAL CONTENT**

Krion's solid surface material is about two-thirds natural material (ATH: alumina trihydrate) and has a small percentage of high-strength synthetic resin.

**ANTIBACTERIAL**

The non-porous, seamless properties of Krion prevent bacteria and fungi from growing and spreading on its surface.

**100% RECYCLABLE**

Products made from Krion can be processed and can be reintroduced into the production cycle at the end of their life cycle at a rate of 100%.

**MAINTENANCE-FREE SURFACE**

Krion has a particularly resistant and durable surface. The non-porous surface is always easy to clean.

**UV RESISTANT**

Krion features an impressively exceptional resistance to ultraviolet (UV) rays.

**NON-POROUS**

Krion has a durable, non-porous surface and is therefore particularly well suited for the bath area.

**BEST FIRE PROPERTIES**

Krion is deemed to be non-flammable. The material is non-oxidising and self-extinguishing. It is classified as Euro Class B-s1-d0 in accordance with the UNE-EN 13501 standard as well as B1 (without limitations) in accordance with DIN 4102.

**MATT SURFACE**

The surface typical for Krion is popular due to its pleasantly soft feel and its elegant look.

**RESISTANT AGAINST CHEMICALS**

Its non-porous, seamless properties make Krion resistant to chemical solutions and chemicals.

**CLEANS THE AIR**

Krion uses photocatalysis to purify the air and support the health of our planet.
